

Updates for Microsoft OCS 2007 Client Software

There are new updates to the client software packages that provide the full functionality for Microsoft Office Communications Server 2007 for Microsoft Windows clients, and the Mac Messenger 7 client.

EVERYONE SHOULD UPDATE TO THESE CLIENT VERSIONS LISTED HERE

- Office Communicator Patch - Version 2.0.6362.64
- OCS Live Meeting Client - Version 8.0.6362.62
- OCS Outlook Conferencing Add-in - Version 8.0.6362.62

In addition, for Apple Macintosh OS X (version 10.4.9 (Tiger) or later) users there is a new Mac Messenger client

- Microsoft Messenger for Mac 7.01

This is the released version and supersedes the Mac 7 beta client

PLEASE NOTE: There is a new site where all things related to OCS will be available. This includes these and future software updates, user guides and general information. This location is <http://wiki.uky.edu/ocs>. Please bookmark this site and check back frequently for any updates or information regarding OCS.

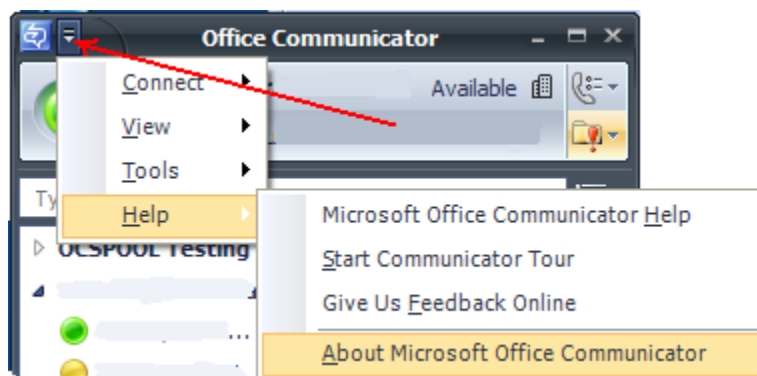

What this Document Covers

This document discusses each of the clients listed above for Windows and the Mac and what you need to do in order to install them on your computer.

Office Communicator Patch - Version 2.0.6362.64

This is a patch to the original version of the Office Communicator client for Windows. While this patch will update any version of the client, it is important that you check not only their communicator client version but also the license. When this product was first deployed some of the original clients were actually using the evaluation license. To determine if you have the evaluation licensed code installed, do the following:

- Open your Office Communicator client, click the “Show Menu” button  and follow the “Help” menu to the “About Microsoft Office Communicator” menu option and click on “About Microsoft Office Communicator”

- Check your version number on the About page. If it is Version 2.0.6362.0 you may have the evaluation licensed code

- Click the “View the Microsoft Software License Terms” link on this About page to bring up the Microsoft Software License Terms page. If this page looks like the following you will need to install the full Office Communicator client that can be downloaded from the wiki site along with the other software updates.

- If this is **NOT** the evaluation version, you can simply download and install the patch code and you are done.
- If it **IS** evaluation the evaluation version, then you must download from the base Microsoft Office Communicator client from the UK OCS wiki site and install it **FIRST** before installing the patch. It is not necessary to uninstall the evaluation code first before installing the base Microsoft Office Communicator client.

OCS Live Meeting Client - Version 8.0.6362.62

This is the latest update for the OCS Live Meeting client. This is not a patch and once it is downloaded from the UK OCS wiki site, it can be installed without first uninstalling any currently installed OCS Live Meeting Client.

OCS Outlook Conferencing Add-in - Version 8.0.6362.62

This is the latest update for the Microsoft Outlook OCS Conferencing Add-in. This is not a patch and once it is downloaded from the UK OCS wiki site, it can be installed without first uninstalling any currently installed OCS Conferencing Add-in.

Microsoft Messenger for Mac 7.01

This is the latest version of Messenger for Mac. For best results, uninstall any existing Messenger for Mac before installing this version.
